pony

Enforced Governance for SAP Cloud ALM

Would you like to adapt SAP Cloud ALM optimally to the way your project or organization works? The application, which was developed on the SAP Business Technology Platform, extends the SAP Cloud ALM with essential functions and configurable options. Using predefined templates and intuitive graphical configuration tools, you can use SAP Cloud ALM more consistently, in a more controlled manner, and significantly more effectively.

INITIAL SITUATION

- You require additional control and configuration options for using SAP Cloud ALM.
- You want to use prebuilt functions such as mandatory field checks, automatic status changes, or consistency checks.
- You need to meet specific audit or compliance requirements.

APPROACH

- Introduction of application's functions
- Preparation of the SAP BTP environment and system connection
- Administrator training
- Updates and support during ongoing operations

RESULTS & BENEFITS

- Predefined extensions to improve transparency and process quality
- Flexible configuration of SAP Cloud ALM to fit the organization's way of working
- Increased control and security
- Reduced manual coordination efforts and avoidance of rework through automated validation and control logic

FACTS

- Annual software rental
- Additional Service: Fast Track Service
