
Integration Platform for SAP Cloud ALM

Product Description

N° 26

COCAT

Seamless Integration for SAP Cloud ALM

Do you want to seamlessly integrate SAP Cloud ALM with your existing Application Lifecycle Management (ALM) tool landscape? *cocat* is an integration platform built on the SAP Business Technology Platform (SAP BTP). It connects SAP Cloud ALM simultaneously with multiple third-party ALM tools using pre-built adapters. A graphical configuration editor enables the definition of mappings, validations, and governance rules – entirely without coding. This allows organizations to retain full control over their integration logic while remaining flexible and independent.

TYPICAL CHALLENGES

- You need to integrate SAP Cloud ALM with one or more ALM tools in parallel.
- You require flexible mapping and orchestration logic without development effort.
- You want greater control and reduced dependency on external integration providers.

BUSINESS OUTCOMES & BENEFITS

- End-to-end traceability across your entire ALM toolchain
- Reduced implementation and maintenance costs
- Flexible no-code adjustments to technical or organizational changes
- Monitoring and transparency via SAP Cloud ALM

IMPLEMENTATION APPROACH

- Preparation of the SAP BTP environment and system connectivity
- Deployment and activation of pre-built adapters
- Configuration based on best-practice templates
- Enablement and training of administrators

KEY FACTS

- Integration platform for SAP Cloud ALM with pre-built adapters
- Annual subscription-based licensing model
- Complementary solutions available within the Vostura portfolio
